with modern frameworks and tools.
-Worked on responsive UI design, state management, API integration, and database management.

Projects

10 Months

SoftBuild software solution

SoftBuild is a software solution for managing construction materials such as cement, sand, bricks, and other related products. It helps construction companies, contractors, and suppliers to manage their inventory, track material usage, and improve overall efficiency. The system involves multiple user roles to ensure smooth operation across different functions.

2 Months

Learn craft

LearnCraft is a static course-selling website designed for instructors (clients) to upload pre-recorded video courses and set prices for students to purchase. The platform operates as a client-student system without any online learning environment. It focuses solely on selling video-based courses efficiently.
